

Library Design

By Taishi, Ko, Hemi

What we didn't like about the current library:

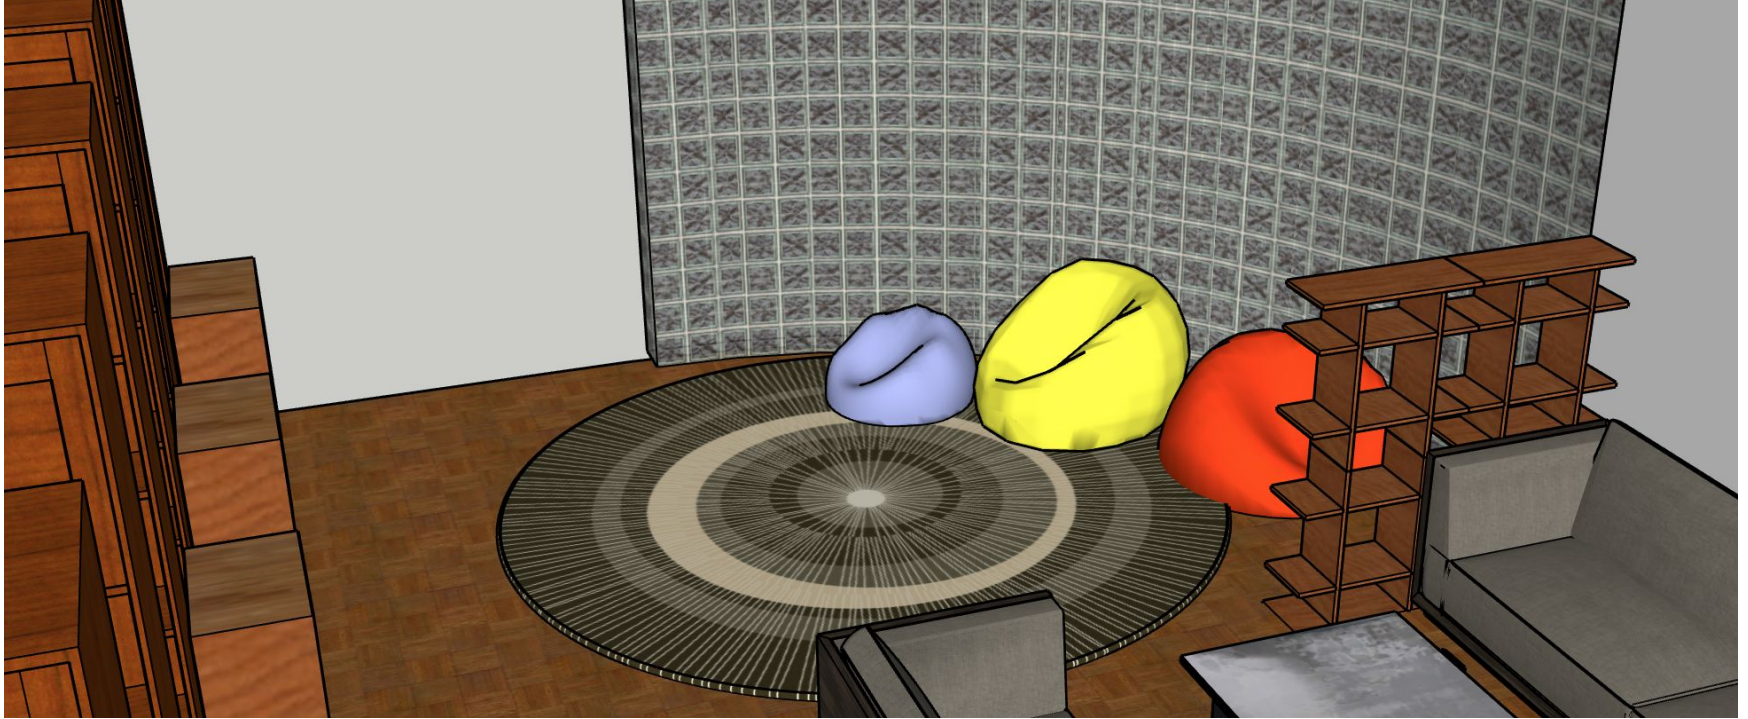

- Too cramped.
- Not much comfort.
- Looks outdated and old-fashioned.

Floor Plan

- Destroy the wall that is separating the library and the storage room
- Computer room stays the same
- Mr. Cooks room stays the same
- checkout and checkin desk in the old storage room
- We added a place for study and reading where the counter is currently
- We also added small shelves for showcasing new books and also so smaller kids can reach the books
- We made the library easier to walk through and making the path more smoother

More space for primary students

Right now in our library we don't have a space for primary school kids to read there books in a comfortable area so we thought about putting a big rug and a few bean bags so they can have comfort in the library.

maximize shelving space

The shelves are just like the old shelves we have but we added some small shelves to display new books or trending books. Since there are many bookspace on the small shelves we can put books for primary school so they have the books where they can reach it.

checkout desk

comfort

We wanted to make a space where secondary students can study with comfort and also where primary school students can read or study as well so we made this comfortable section.

Our Initial Ideas:

- Expand the Library by removing the wall separating the storage room and connecting it with the library.
- Clear part of the storage room so it can shelve some books.
- Move the check in/check out counter.
- Move the teachers printer into the library.
